

Airport Fiber Optic KVM Technical Solution

Overview

Explore high-performance solutions for Air Traffic Control Centers and Airport network applications. IHSE systems deliver critical data to control towers, aid ground and air personnel training, assist with baggage handling and inform passengers through. AVCiT's Phinx Fiber KVM system allow to separate computers from operator console desk and store them into centralized data center, where is well-cooling, safe and easier to manage. For example, any point of A, B, C or D is failure will not affect the system running. Solution is based on FPGA. In the dynamic world of air traffic control, IP KVM technology emerges as a pivotal innovation, revolutionizing the way Air Navigation Service Providers (ANSPs) manage and operate their systems. The solution builds effortless IP extension that eliminates the. High-resolution infrared cameras record the flight movements and all events on runways within a radius of 360 degrees and transmit the high-resolution images to controllers sitting in a remote tower. State-of-the-art equipment in the control room combines the individual image segments to form a.
