

# Are outdoor galvanized cable trays safe

## Overview

The only safe option that can be used in an open environment or a place with a high level of moisture is the hot-dip galvanized (HDG) steel. The wrong one is the most common error, which results in rust showing itself much earlier than expected. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to silicone, overheating or. EMI/RFI Shielding: Metallic trays provide some shielding; for critical applications, consider covered or solid-bottom trays. General purpose, power cables, long spans. Excellent cable ventilation, easy cable access, high strength-to-weight ratio. In the majority of cases, covers are not used on cable trays for technical or safety reasons, but due to the "raceway complex," a feeling by specifiers that cables must be totally enclosed in metal.
