

Automatic feeding of ceramic inserts

Overview

Insert molding operations can be automated by building a system comprised of an insert workpiece feeder, take-out robot and stocker. Precision sensors and data recording devices were. For many years now, INMATEC Technologies GmbH has been developing and producing feedstocks for the ceramic injection moulding technique. Our feedstocks are used throughout the world. With comprehensive experience of all aspects of the ceramic injection moulding process, we are able to provide. This industry-leading high-speed automatic insert feeder system features a patented design that addresses all major insert feeding challenges. It provides maximum access to all components from one side of the machine while maintaining a compact footprint. By using just a single take-out robot to prepare inserts, place them in molds, and extract and stock the finished products, users save on equipment investment and.

Novel Ceramic Clay Automatic Feeding System and

PDF | This study aims to verify the feasibility and effectiveness of an automatic feeding system in the ceramic clay-forming process.

Jan 28, 2026

Bowl Feeder to feed and orientate Brass Inserts

Solution The bowl feeder system is designed to automatically sort and feed brass inserts. The system includes a bowl feeder, a linear feeder, and at the end of the

Jan 12, 2026

The Influence of Edge Preparation on the Performance of Ceramic Inserts ...

Figure 5 shows the influence of cutting speed, feed and edge preparation on the feed force. Not surprisingly, the feed force increased with feed for the same reason previously explained

Mar 20, 2026

Ceramic Feedstocks

INMATEC adds plastic binders - which soften when heated - to the ceramic powders. The obtained material, now called "feedstock", is then injected into the mould in the injection moulding machine.
