

# Base station communication equipment room maintenance

## Overview

Maintaining and upgrading communication base stations is essential for reliable and efficient wireless network operation. Regular maintenance includes inspection, cleaning, software updates, and hardware replacement. These air conditioners are constantly running throughout the year, consuming large amounts of energy. The upgrade process involves need assessment, design, procurement, installation. For setups with a dedicated communication equipment room, these devices are arranged either on integrated racks or standalone cabinets, forming a complete, functional system. Main Base Station Equipment Often referred to as the brain center, this includes: Baseband Unit (BBU): Handles baseband. In this article, you will learn how to perform routine maintenance on cellular communication systems using some basic tools and techniques.
