

# Bidi multimode optical interface module

## Overview

The Terabit BiDi MSA promotes a common set of optical interface specifications based on 100 Gb/s per lane multi-mode technology to advance the development and adoption of high-density 800 Gb/s and 1.6 Tb/s BiDi pluggable optical interfaces. In addition, they allow various distances to be created, starting from 80m right up to 1920m with the benefit of being able to patch together different distances in one go. At one end of the stretch we deployed a 1G Bit-Error-Rate Tester with a. At the other end, we placed a inside our flexbox. Bidirectional optical transceivers, by their definition, allow full-duplex optical transmission through one optical fiber. This is achieved with two independent signals which differ from each other in their wavelength, 1310nm/1550nm, or 1310nm/1490nm. It achieves simultaneous bi-directional communication by using different. Chengdu, China, and Fremont, California, March 7, 2023 - Eoptolink Technology Inc. The portfolio consists of 800G SR4.
