

Cable trays and air ducts are shared

Overview

Cable trays and air ducts are specialised systems serving distinct purposes: one is the structural backbone for power and data, the other is the insulated, sealed lung for air. In the intricate network of building services, cable trays and air ducts are fundamental yet fundamentally different systems. This guide provides a clear, authoritative comparison for project managers, engineers. Cable tray is a mechanical support system just as strut is a mechanical support system. However, they are not interchangeable. 3 Are stainless steel ties better than plastic ones?

The. You are free to share this work (copy, distribute and transmit) under the following conditions: you must give credit to the ITER Organization, you cannot use the work for commercial purposes and you cannot modify it. For a full copy of this license visit:. How to approach cable routing for HVAC works?

Should it be started after or before the duct layout has been prepared?

How the clashing between cable tray and duct, pipelines can be avoided?

Construction coordination is the job of the General Contractor. Ductwork above ceilings should have very few.
