

Canadian Pipeline Temperature Measurement Fiber Optic Cable Brand

Overview

DNV is a leader in verifying distributed fibre-optic sensing (DFOS) systems for pipeline leak detection. A single fiber optic temperature monitoring system supports 1 to 64 sensing channels — making it one of the most scalable and cost-effective online monitoring solutions available. The probe is fully dielectric, rated for ≥ 100 kV insulation, making it the go-to choice for switchgear monitoring. High-fidelity Distributed Sensing (HDS) is the only fiber optic platform in the world that has been 3rd party validated* for detecting pinhole leaks in liquids and gas pipelines, with zero false positives. MicroDucts were developed as a solution to house fiber cables that were smaller in size, but still carried significant capacity. Today, MicroCables range from 6 to 432-fiber.
