

Check CPU utilization on fiber optic switches

Overview

Quick Answer: To check CPU utilization on a Cisco switch, use the command “show processes cpu” in the CLI. The second is to send/receive packets to/from the switching hardware. Click the blue section of the chart to display additional memory usage details. Monitoring this metric is crucial for ensuring the efficient operation of the network. The show processes cpu history command displays in ASCII graphical form the total CPU usage on the router over a period of time: one minute, one hour, and 72 hours, displayed in increments of one second, one minute, and one hour, respectively. Maximum usage is measured and recorded every second;.

2021/12/15-04:18:11, [MAPS-1002], 5818, FID 128, ERROR, SW02, Chassis, Condition=CHASSIS(CPU>80.00%), RuleName=CHASSIS_CPU_UTILIZATION, Dashboard Category=Switch Resource. Cisco recommends that you have knowledge of these topics: The information in this document is based on these software and hardware versions: The information.
