

# China-Europe Equipment Type SD-WAN Device

## Overview

China Telecom (Europe), as a global technology leader, builds flexible, feature rich SD-WAN platforms over our advanced private network. Looking to fully realise your ambitions on the cloud?

With digital. Software-Defined Wide Area Networking (SD-WAN) is a new trend for organizations to more efficiently utilize bandwidth and improve application performance on their SD-WAN infrastructure. Global WAN combines a range of networking technologies, such as the Internet, MPLS-VPN and LTE, and uses. Cato SD-WAN provides secure and resilient connectivity for branches and datacenters on-premises and in the cloud, and replaces expensive private connectivity options. Zero-touch deployment model makes enterprise rollout quick and simple. 5G/wired uplinks enable reliable and scalable. SD-WAN business relies on China Telecom's high-quality overseas cloud network resources, collaborating with over 300 service providers worldwide to provide one-stop solutions, and allowing users to quickly establish enterprise private networks, realize directional optimization access for. An SD-WAN appliance is a hardware or virtual device that enables the deployment and management of SD-WAN networks. It continuously monitors multiple network connections to dynamically route traffic over the most efficient path. SD-WAN appliances provide built-in security features like firewalls.
