

# Converting PoE to a regular switch

## Overview

If you need to connect PoE devices using a normal (non-PoE) switch, you must insert a PoE injector between the switch and each device. The injector adds power to the Ethernet line and requires a separate power source. PoE switch and regular switch vary in terms of PoE accessibility. A regular Ethernet switch does not provide PoE for supplying. A PoE Switch, also known as Power over Ethernet Switch, is a network device that allows users to power and connect devices such as IP cameras, VoIP phones, and wireless access points.
