

Corrosion of Stainless Steel Cable Trays

Overview

Stainless steel cable trays have sturdy structure, resist rust and they are specified for cable containment and cable support in oil, gas, petroleum, offshore, marine and a wide range of applications. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl wiremesh, ZnMg metal cable trays and accessories and ZnNi screws and bolts. Presentation pictures do not always include Personal Protective Equipment (PPE). Understanding the causes of stainless steel cable tray corrosion is vital for selecting the right materials, ensuring proper installation, and implementing effective maintenance practices. Corrosion Classes Applied to Cable Tray Environments: C1 - Very Low Typical Environments: Indoor, climate-controlled areas like. Stainless steel cable trays represent a premium solution for electrical infrastructure applications where superior corrosion resistance and long-term durability are paramount. Galvanized Steel: Coated with zinc to prevent rust. Aluminum: Lightweight and naturally corrosion-resistant. Both procedures are certified and audited by AENOR, which guarantees full compliance with national and international standards.
