

Disable the switch s optical port

Overview

To prevent data loss or potential network disruption, you should disable the port associated with the SFP module before removing it. If you're setting up a Cisco Catalyst switch, such as 1000, 2960X, 3560X, 9200, 9300, etc. , and you insert a non-Cisco branded SFP into one of the SFP slots you will likely receive one of the errors below: This is because Cisco doesn't support 3rd party SFP or GBIC modules. By support I mean they. Just insert an empty RJ45 connector with a meaningful label on it. But ok, someone who doesn't want to read the label will not have any trouble. Or you can use something like this:. By default, Cisco switches perform authenticity validation on inserted optical modules. The bidirectional SFP modules combine two SFP optical devices that must be used as a pair to establish the. To remove an SFP, SFP+, or QSFP+ transceiver, follow these steps: Attach an ESD-preventive wrist strap and follow its instructions for use. Remove attached fibre-optic cables, if any.
