

Distribution Box Protection Level Certification

Overview

Explosion Proof Distribution Box & Electrical Enclosures are certified for Class I, Division 1 and Class II, Division 1. You need to check if the enclosure fits the danger level and protection type. When they fail, everything goes dark. Today, we'll explore how international standards translate into practical protection through rigorous testing methodologies that simulate the harshest conditions on earth. Manufacturers with in-house testing capabilities may qualify to perform testing at their facilities under UL's Data. A CB Test Certificate from one member country is recognized by all other member countries, significantly reducing testing redundancy and certification costs. When planning your certification strategy, consider prioritizing standards based on your target markets. For example, you might need Ex d for flameproof or Ex i for safe designs.
