

# Does a PoE switch require fiber optic cable

## Overview

Power over Ethernet (PoE) does not work directly over fiber-optic cables because fiber-optic cables are designed to transmit data using light, and they do not conduct electricity. PoE requires copper cables (such as Cat5e, Cat6, or Cat6a) to deliver both power and data. PoE is considered safe, and hence its adoption is widespread. The technology conforms to IEEE standards, like 802. The media converter is capable of converting the. Power over Ethernet (PoE) is a useful technology in powering remote devices, but as we see with any copper network cable, the challenge lies in the limited distances of UTP cabling. In the. An SFP PoE Switch is a combination of data networking and power delivery through Small Form-factor Pluggable (SFP) ports that allow devices to receive signals and power over a single fiber or copper connection.
