

Error retrieving ST interface

Overview

This article describes tips to prevent or fix errors encountered when connecting the STM32 target board to your computer such as: “No target connected”, “Target not found”, “No ST-LINK detected”, and “ST-LINK connection error”. We recommend using the STM32CubeProgrammer for programming STM32. I am currently using the ST-LINK debugger to program my STM32F3 Discovery Board. The IDE that I am using is Atollic TrueStudio 5. Now I am facing a very weird problem which is I keep on getting the message Error in initializing ST-Link Device. Reason : (-1) Failed to connect to device. I've designed a following PCB that is intended to drive LoRa RA-02 module with bare STM32F030K6T6. Design is based on the "AN4325 - Getting started with STM32F030xx and STM32F070xx. I recommend you to follow the steps mentioned in the following article to connect to the STM32 board using STM32CubeProgrammer: [How can I connect to my STM32 evaluation board using STM32CubeProgrammer?](#)

Verify all physical connections, such as: USB cables and connectors, and try using a different. After I ran my code into my STM32F446RE, I couldn't upload any code after my last code, and it gave me this error: I tried to do these options: Update my ST-LINK driver and run it as "dpinst_amd64". In setting, I set "Connect under reset" and SWD interface (I'm not sure about frequency).
