

Estonian fiber distribution box brand

Overview

DNS is an Estonian brand of structured cabling systems for networking and telecommunication applications. Since ushering in the telecommunications revolution with the invention of low-loss optical fiber in 1970, Corning has been continually innovating to increase the speed and capacity of optical fiber networks, while providing innovations that make deployment easier and more cost effective. This involves using GIS software to manipulate, visualize, and model data to support spatial analysis and presentation. After the production started in 2002, this production facility has grown to be the biggest fiber optic termination house in the. Splice boxes and splice distributors are essential for a reliable fiber optic cabling system and serve as a connecting point between the fiber optic installation cable and the in-house network.
