

Fiber Optic Cable Fixing Vibrator

Overview

The PZT fiber vibrator is a fiber optic vibration simulator that induces periodic vibrations in the optical fiber by applying voltage to the PZT material, causing it to undergo cyclic compression and tension. As fiber optic infrastructure expands across urban and rural environments, securing aerial fiber optic cables (ADSS / GYTS / GYXTW / figure 8 / drop cables etc.) in pole-mounted applications becomes essential. At Gcabling, we provide a complete set of reliable, corrosion-resistant tension clamp. Choose fiber optic accessories and tools for your next installation, including access tools, tool kits, polishing film, cleaning accessories, and replacement parts. Our termination kits, for example, are equipped with all of the necessary tools — pin and socket polishing tools, jacket strippers. The tension Clamp for fiber cable is designed to fix and keep the tensile state fiber. Usually, the fiber laying around the electric transmission line or laying on the building is resistant and wears less than 50m.
