

Fiber Optic Cable Terminal Construction

Overview

We terminate fiber optic cable two ways - with connectors that can mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear or with splices which create a permanent joint between the two fibers. A Fiber Termination Box, also known as an optical termination box (OTB), is a compact, specialized enclosure designed for the organization, termination, splicing, and protection of fiber optic cables. FO-VC2 JOINT USE - VERICAL MIDSPAN CLEARANCES 48. APPENDIX A - COVER SHEET / TOC 52. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. It offers a cost-effective method to handle large quantities of fiber cables in an orderly. Technicians install an Optical Network Terminal (ONT) at the customer's location, which converts the optical signal into digital data for use by routers and devices. FTTH providers and other fiber to the home providers offer different service tiers depending on speed and bandwidth needs.
