

# Fiber Optic Cable gftzy

## Overview

GYFTY outdoor fiber optic cable is a non-metallic cable used for the power transmission system, the excessive areas of thunder and the high electromagnetic interface. It allows long distance communication, local trunk line, CATV and computer network system. Long-haul communication, interoffice communication. The fibers are positioned in loose tubes that are made of high-modulus plastic and filled with tube gel. The tubes (and fillers) are stranded around a non-metallic central strength member to form a cable core. Then, a LSZH outer jacket is extruded. FRP as. GYFTZY (non-metallic strengthening member, flame retardant, loose tube layer-stranded filling type, polyethylene sheath) non-metallic flame-retardant optical cable (general power optical cable adopts layer-stranded type) is basically the same as in GYFTY, mainly based on GYFTY optical cable The. The GYFTZY optical cable delivers high performance and reliability in demanding environments.
