

Fiber optic cable between OLT devices and switches

Overview

The ODN is a passive network consisting of fiber-optic cables, splitters, and couplers connecting ONUs to the OLT. The OLT transmits data downstream and upstream through the ODN using a specific protocol, such as the Gigabit-capable Passive Optical Network (G-PON) protocol. Equipment Components Generally speaking, OLT equipment includes a rack. In the age of fiber-to-the-home (FTTH) and ultra-broadband connectivity, the Optical Line Terminal - or OLT - is one of the most crucial devices powering our high-speed digital world. In this post, we are going to introduce the FTTH cabling network from the four aspects: OLT, ODN, ONU, ONT. But no matter which type of PONs, they have a same basic. At the heart of this fiber network lie essential components— OLT, ODN, ONU, and ONT —that make this technology function seamlessly. PON (Passive Optical Network) refers to a fiber optic network built using a point-to-multipoint topology and fiber.
