

Fiber optic cable splicing with 144 cores or less

Overview

Learn how to splice fiber optic cable using fusion splicing with this complete step-by-step guide. Includes tools, best practices, loss standards (ITU-T G. 652), cost analysis, and FAQs for network engineers and installers. Unlike using connectors, which are designed for frequent connection and disconnection at patch panels, splicing creates a permanent, stable joint with minimal light loss. Another method of connecting optical fibers is termination or connectorization, which consists of processing the end of a fiber optic bundle so that it can be connected to other fibers or devices through fiber optic. Fiber optics is the fastest and one of the safest ways to transmit information online. Fiber optic strands are ultra-lightweight and about as thin as human hair, and yet, they have more than eight times the pulling tension of a copper wire. [com/oneuptechs](https://www.oneuptechs.com) In this video I am ribbon splicing a 144f cable to another 144f cable, I am only splicing 5 ribbons straight through and dropping 12 fibers off in the above tray for the single spliced drops.
