

Gas Micro Module

Overview

This Gas Module enables precise dosing of a wide range of gases, seamlessly integrating gas handling into your workflow. Galvanic's Gas Micro instrument is a three-in-one measurement device that calculates the corrected volume, according to AGA7 and AGA8. In the former, the turbine and rotary meter sends an electronic signal to the. We develop high-quality and pioneering gas sensor modules for measuring and monitoring gas concentrations for industry and medical technology as well as for environmental and laboratory technology. With over 30 years of experience, we offer you the highest quality and reliability - Made in Germany. It supports a wide range of gases, including hydrogen, nitrogen, oxygen, and more, allowing you to tailor the gas environment to meet your specific experimental. The Agilent 990 Micro GC Natural Gas Analyzers are shipped as a total solution. The analyzers are factory tuned, and come with final test data, analytical method parameters, a user manual, and a check-out sample. Optimized. Use custom-built compact gassing modules to optimize your gas mixing and save space. A single manifold can be used as a delivery system for various gases.
