

Gearbox optical module

Overview

A Gearbox is an internal module component that performs channel mapping and rate conversion between the module's electrical interface (host side) and its optical interface (fiber side). With optical networks, one challenge is how you get from the optical domain to the electrical domain. Operating at the physical layer of the OSI model, optical modules are core devices in optical. Gearlink Technology has been focusing on developing and manufacturing high speed optical fiber module and cable module transceivers including 400G QSFP-DD / 200G QSFP56 / 100G QSFP28 / 40G QSFP + / 25GSFP28 / 10GSFP + / 1.25G SFP / AOC / DAC since established. The optical transmitter and receiver. A range of 100G optical module types have been created through standards development organizations (SDOs) and Multi-Source Agreement (MSAs) to meet various reach, cost, and other market requirements.
