Discover our range of products in Generator Protection: MiCOM P34x, PowerLogic™ P3, Sepam series 60, Sepam series 80, PowerLogic™ P7. Protective relays are electrical devices that are designed to detect abnormal conditions in power systems and isolate the affected part of the system. In order to identify problems including overloads, short circuits, and ground faults, they keep an eye on several factors, including current. REG630 is a comprehensive generator management relay for the protection, control, measurement and supervision of small and medium sized power generators and generator-transformer units in utility and power distribution systems. REG630 is a member of ABB's Relion® family and part of its 630. The AF0500 is a microprocessor-based arc-flash protection relay that limits arc-fault damage by detecting the light from an arc flash and rapidly tripping the feeder breaker. The unit is well suited for switchgear, transformer. Tripping current: 100 A - 1,000 A. Here are the top-ranked protective relay companies as of May, 2026: 1. NOARK Electric North America, 2. The SIPROTEC 7SX85 is a modular universal protection device. Get precisely tailored functionality for any application and pay only for what you. The top companies in protective relay market are playing a pivotal role in enabling grid resilience, automation, and fault protection across modern power systems.
