

Green wire in the distribution box terminal block

Overview

That exact component is a Phoenix Contact Ground modular terminal block - UT 2,5-PE/L/N (or similar size). Protective Earth, Line and Neutral. Keep in mind: neutral means something different in EU than it does in USA. In the EU, cables are often 3 wires: brown, blue and. The Terminal Block Color Code refers to the standardized system of using specific colors for terminal blocks to indicate the function or purpose of the wires connected to them. I am guessing Blue is for DC, but can't figure out what grey is usually meant for. Insert the stripped end of the wire into the correct terminal opening. Check for a firm. The green wire, also known as the grounding wire, plays a crucial role in ensuring the safety of electrical circuits. This path to ground helps to prevent. A Groundblock takes your ground wire and electrically and mechanically attaches it to the DIN Rail (ground). NOTE: We must assume that the control cabinet or enclosure is properly grounded.
