

Half perimeter of the main distribution box

Overview

The half perimeter is essentially half the total length of the perimeter of a closed geometric shape. Understanding this parameter is crucial for effectively placing internal components and ensuring. This document provides specifications for various types of plastic distribution boxes, including their dimensions and features. It describes HA, HK, and LGD series boxes with dimensions ranging from 100-415mm in length, 105-323mm in width, and 75-140mm in height. It functions as the central hub that distributes electrical power from the main supply line to various branch circuits within residential, commercial, and industrial settings. A distribution box ensures that electrical supply is distributed in the building, also known as a distribution board, panel board, breaker panel, or electric panel. Power Supply is 430V (P-P), 230 (P-N), 50Hz. 6 for Non Continuous Load & 1 for Continuous Load for Each Equipment. Branch Circuit-1: 4 No of 1Phase.
