

Hazards of Damaged Relay Protection Devices

Overview

Relays can get damaged in several ways. Overloading with too much current is another common issue, leading to relay failure. Dust, dirt, and moisture can contaminate the relay's contacts. Refer to the Safety Precautions for individual Relays for precautions specific to each Relay. Electric shock may. This abstract delves into the consequences stemming from such alterations and emphasises the imperative of. While PPE protects for first and second degrees burns it does not provide sufficient protection for the impact and forces that a high incident energy arcing fault produces and the gases released. Mechanical failures can lead to contacts sticking together or failing to close, resulting in circuit interruptions.
