

High-density PDU fiber optic cabinets low-temperature resistant in stock

Overview

Our above-ground passive fibre distribution cabinets are made of high-quality, weather-resistant, and recyclable polycarbonate. They are designed for GPON and PtP fiber optic access networks and reliably protect all network components. Leviton manufactures a wide variety of fiber optic enclosures for all your project needs, including rack- and wall-mount, 1RU to 10RU, zero-U, high density, and application-specific models. The rotating design enables the power cord to be led out from multiple directions, reducing cable tangling and making management more straightforward. Convenient. Olabs' FiberFlex™ Power Distribution Units (PDU) are an essential element in managing power capacity and functionality for server racks, wallmount racks, LAN racks in either data centers, offices, universities or any network facilities that require power distribution into server racks or cabinets.
