

How is the Norwegian armored optical cable

Overview

The fiber cable system runs from Harstad via Breivika on the island of Andøya to Hotellneset on Svalbard. The system consists of two separate cables, Segment 1 and Segment 2 between Breivika and Hotellneset, and Segment 1A and Segment 2A between Breivika and Harstad. The lengths for Segment 1 and 2 are 1,375 and 1,339 kilometers (854 and 832 mi), respectively, and for Segment 1. OverviewThe Svalbard Undersea Cable System is a twin which connects to the mainland of. The two consist of two segments, from to Breivika in Svalbard was chosen for the location of SvalSat because of its high which allows all satellites in a with an orbit above 500 kilometers (310 mi) to use only a single ground station, yet allow downloadin. The Svalbard undersea cable system connecting the archipelago to the mainland was unexpectedly severed in January 2022. A preliminary police investigation implicates human activity.
