

How much distance is the fiber optic cable reel

Overview

Corning, OFS, and Prysmian all offer 20,000-foot reels for loose-tube cables in this fiber count range. Some will go to 25,000 feet on request for 12F, though you'll pay a premium for the larger reel and may face delivery logistics headaches if the staging area is tight. For example, a fiber optic cable with a distance of 1km supports a bandwidth of 500MHz, while a fiber optic cable with a distance of 2km can only support a bandwidth of 250MHz. There are three main reasons for this: First, high-bandwidth signals are more susceptible to chromatic dispersion than. The fiber optic cable reel is made of ABS and PC material, which is ideal for using in communication, broadcast and pro audio applications. Attenuation is the progressive loss of signal strength that occurs as light travels through the fiber. During installation, all curvatures should be smooth. These two types require different electronic equipment. Proterial Cable America's standard singlemode glass is labeled as OS2.
