

How to adjust lights without a high low beam module

Overview

To adjust headlights without a wall, manually adjust the headlight levels by finding the adjusting screw and turning it slowly clockwise to raise the height of the lights or counterclockwise to lower them. Make sure the most intense part of the headlight beam hits at or just below the vertical. Adjusting your low beams for vehicles with combined low and high beam bulbs should also accurately align your high beams. Some of the common options include H4, H7, H9, H11, H13, and 9005. Note: It is. The load condition and pitching motion of the vehicle change the illumination range of the headlamps. This may dazzle other road users. □□ General guideline: The beam should be about 2 inches lower than headlight height when measured at 25 feet away. 6 m) to see how your lights relate to the center point of each + sign on the wall. Doing this will ensure optimal visibility without blinding oncoming drivers.
