

How to connect a non-PoE switch to a PoE device

Overview

The connection method is: Non-PoE switch → (network cable) → PoE injector → (network cable) → PoE terminal. The injector provides power, and the switch only processes data. As long as the port is configured for standards compliant 802. And what happens if you accidentally plug in a normal (non-PoE) device into a PoE switch?

I explore all this – and more – in this video. including via a VERY suspect looking demo! I combined TWO power over Ethernet switches with three non-PoE devices (a HP printer, DVD player and TP-Link Gigabit. The PoE injector is a network device that enables the non-PoE devices like regular network switches to work with the PoE-compatible devices by injecting the PoE capabilities into the legacy network system. It offers a cost-effective solution to inject vitality into the old network system since the. Most LANs these days can offer connectivity to both Power over Ethernet (PoE) and non-PoE devices.
