

How to connect a power supply to an industrial switch

Overview

Before getting started, make sure the power supply is off. Take the red wire, and connect the positive connection of the power supply to the positive connection on the switch. The power-supply modules are field-replaceable units (FRUs) and are hot-swappable when deployed in non-hazardous. Only safe way is to use a switch that breaks both Live and Neutral, when using non-polar mains plugs. This is basically what you want to end up with: simulate this circuit – Schematic created using CircuitLab In your image, you would take a short wire from L on the back of the plug to the "I" (or. In this tutorial, learn step-by-step how to wire a Switching Power Supply (SMPS) for your electronics projects or industrial applications.
