

How to cut materials at the corner of a cable tray

Overview

Mesh cable trays can be easily cut and bent onsite. Developed by Interstates, this cable tray cutting guide acts as a guide for a metal cutting circular saw for cutting the side rail of a cable tray as well as a guide for drilling the connecting holes in the cable tray. They come in various materials such as steel, aluminum, and fiberglass, and shapes including ladder, perforated, and solid-bottom designs. Oglaend System manufacture and deliver Multidiscipline modular bolted support systems, cable trays, cable ladders and accessories for complete installation and containment of Instrument, Electrical, Telecom, HVAC and Piping. How to calculate size of cut-out section (D) for a pre-determined angle set Eg. You have used your protractor and worked out you need to make a 22° angle in a 600mm cable tray. By applying the following formula you can quickly find the size of cut out section that you need to cut out of the side of. Unlike these rigid alternatives, wire mesh trays offer the unique ability to be cut and bent on site, allowing for seamless navigation around corners, columns, and those often tricky tight ceiling spaces. This flexibility not only simplifies the installation process but also helps to accommodate. Proper cutting ensures a clean edge, maintains structural integrity, and prevents damage to the trays or cables.
