

How to ground and protect the distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical. Here are the steps on how to ground a power distribution box: 1. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. Each DISTRIBUTION BOX and controller must be grounded. This helps to reduce the potential difference that exists between conductive parts and the earth.
