

How to pass optical fiber through a panel

Overview

In any network restructuring, a passive device such as a fiber optic patch panel can be used. It has a series of adapter panels and ports where the connectors of the fiber optic connectors plug. With the growth of the fiber industry, a wide array of fiber optic patch panels have been developed to fit the many needs of these varying environments. What is a Fiber Patch Panel?

Fiber optic patch. During cable installation at patch panels, installers need to achieve conformity to the National Electrical Code (NEC). Pre-terminated cables arrive with the delicate end-faces already polished and protected, ready to plug directly into the ONT or a patch panel. The specific connector type, often an SC/APC with a green housing, must match the requirements of the service provider's equipment.
