

How to protect server rack network equipment from lightning strikes

Overview

Proper electrical grounding is essential in protecting server platforms from lightning strikes. Racks should be grounded to outlets. Is there an easy way to protect Ethernet from lightning damage?

With a deep understanding of magnetics and circuit theory along with good grounding and shielding techniques, there is a solution. Lightning-induced damage to Ethernet-connected devices can be prevented if the proper precautions are. But how do tech companies protect their 24 h working pc/servers and other electronics from lightning. What can I do to protect a home server from such accidents?

How can I leave a home pc turned on for remote work (weather is unpredictable) ?

The best you will be able to do in a home environment is. To maintain Ethernet-connected devices' system integrity and functionality, developers need a robust solution to shield sensitive electronics from destructive energy transfers. This article briefly describes how surges affect electronic systems. Mike Leksan explains how advanced lightning protection solutions can safeguard your infrastructure.
