

How to shut off the main power supply in the distribution box

Overview

Flip the Main Breaker: To turn off the power, firmly push the main breaker switch to the "OFF" position. This is usually a lever that moves either up or down. "Can you turn off the main circuit breaker yourself?"

Yes, you can turn off your main circuit breaker yourself, and it's a crucial skill for home safety and troubleshooting. What is a main circuit breaker?

The main circuit breaker is the primary switch that controls all electricity flowing into your home. A disconnect box is an essential part of any electrical installation, as it allows you to safely disconnect power from a specific circuit or equipment when necessary. A disconnect box wiring diagram provides a visual representation of the electrical connections and components within the disconnect. To shut off the electrical power to your entire house, locate the main electrical panel (it pays to know where this is before you need it!) and flip the main circuit breakers at the top (usually a pair) to OFF. To shut off the power to individual rooms or circuits, shut off the branch circuit. Read the article below to learn how to shut off power before breaker box.
