

How to use a pigtail fiber stripping tool

Overview

Use the fiber strippers to strip ~1" (25mm) from the end of the fiber in 3 steps, about 1/4-3/8" (6-8mm) at a time. Hold the stripper at a 45degree angle to the fiber to reduce stress on the fiber. If you're new to fiber optics or want to enhance your technical skills, this guide will help you understand how to splice fiber pigtails safely and efficiently. Instead of building a connector from. CFS-2 fiber cable cutting scissors are used to strip 125m optical fiber and 250m cladding, the second hole can strip the outer sheath of the pigtail; the design can be used without adjustment and can quickly and accurately strip 2-3mm, 900m to 250m, 250m to 250m 125m optical fiber without damaging. Use the fiber stripper to cut off 2" (50mm) of the cable jacket and pull off the cut piece. Note that some strippers have only 2 grooves -. Fiber strippers are precision tools that reliably and cleanly remove a defined length of coating (often 30-40 mm) from a fiber end so that the bare glass is exposed without scratching or nicking it. These are generically referred to as "Fiber Strippers".
