

# Huawei Switch Optical Port Mirroring

## Overview

HUAWEI S Series Switch-Configure Port Mirroring explains the usage scenarios and configuration methods of port mirroring. For more information about mirroring [https://info. moreIn](https://info.moreIn) local port mirroring, an observing port is directly connected to a monitoring device and directly forwards the packets copied from a mirrored port to the monitoring device for fault location and service monitoring. Depending on the observing port type, port mirroring is classified into local port mirroring and Layer 2 remote port mirroring. All views After observing ports are configured using the observe-port (local observing port) or observe-port (remote observing port) command in the system view, you can run the display observe-port command to check detailed. Use the command display transceiver to view the optical module information of all optical ports, and use the command display transceiver interface interface-type interface-number to view the optical module information of a specific optical port.
