

Increasing the height of network cabinets

Overview

Vertical Space: Consider the height of the cabinet measured in “U” (1U equals 4.2 inches). So when you see a “42U cabinet,” that means it can hold equipment measuring up to 42 U units in height. **Cabinet Assembly:** If your cabinet is in a “flat pack,” assembling it vertically directly on the floor may result in misalignment due to small irregularities that may exist in the flooring. It is. Today, manufacturers are designing data equipment rated at 75W and 150W per square foot, and even higher because server vendors are introducing equipment as small as 1U in height-particularly with servers aimed at the Internet Service Provider (ISP) market. In most business environments, choosing a cabinet with at least 20–30% extra rack space prevents. Choosing the right size network cabinet is one of the most important steps in building a stable, safe, and efficient IT or telecommunications system.
