

Is Tongafen gigabit or 10 gigabit

Overview

10 Gigabit Ethernet (10GE, 10GbE, or 10 GigE) is a group of computer networking technologies for transmitting Ethernet frames at a rate of 10 gigabits per second. It was first defined by the IEEE 802.3ae-2002 standard. Unlike previous Ethernet standards, 10GbE defines only full-duplex point-to-point links which are generally connected by network switches; shared-medium CSMA/C. Physical layer modules To implement different 10GbE physical layer standards, many interfaces consist of a standard socket into which different physical (PHY) layer modules may be plugged. PHY modules are not specified in an official s. There are two basic types of used for 10 Gigabit Ethernet: (SMF) and (MMF). In SMF light follows a single path through the fiber while in MMF it takes multiple paths resulting in differential. 10 Gigabit Ethernet can also run over twin-axial cabling, twisted pair cabling, and. 10GBASE-CX4 was the first 10 Gigabit copper standard published by 802.3 (as 802.3ak-20).
