

Is a distribution box considered a switch

Overview

distribution box includes a main switch or breaker that controls the entire electrical supply entering the building. This switch allows for the isolation of power during maintenance or emergencies. defines a switchboard as 'An assembly of circuit protective devices, with or without switchgear, instruments or connecting devices, suitably arranged and mounted for distribution to, and protection of, one or more submains or final subcircuits, or a combination of. The function is different: switchgear is a complete set of electrical switchgear and control equipment, it is used as a power center and the main distribution device, mainly to play the role of a switch on and off. And distribution cabinet is to plays the function of distribution of electrical. A distribution board is a fixed electrical panel that divides power into circuits with protection; a distribution box is more compact or portable, used for junctions or temporary setups.
