# Is broadband via cable or fiber optic cable

## Overview

General broadband uses DSL, cable, or satellite delivered over copper or coaxial networks. Most businesses start on broadband. The primary difference between fiber optic and cable internet is the transmission medium used for data transmission. Fiber internet uses optical fiber cables made of ultra-thin glass fibers that transmit data as pulses of laser light. It's very, very fast, especially compared to traditional ADSL broadband, and gives you a much more reliable connection to boot. With fibre broadband, your connection is generally made up of fibre optic lines up to your. Here's a concise overview before we dive in: traditional broadband (DSL, cable, satellite) provides “always-on” internet through copper, coax, or wireless links, while fiber optic internet carries data as pulses of light over glass fibers for vastly higher throughput and minimal signal loss. Selecting the right one often feels confusing, but a proper choice drastically improves your daily online experience.
