

Is it a good idea to convert fiber optic cables into routers

Overview

Fiber routers are known for their reliability, as fiber optic cables are less prone to interference and signal degradation compared to traditional copper cables used in normal routers. This means that fiber routers are less likely to experience dropouts or slowdowns during peak usage. In this guide, we'll walk you through how to connect a fiber optic cable to a router safely and efficiently. Instead of a modem, fiber connections require an Optical Network Terminal (ONT), a device that converts fiber signals into an Ethernet connection.

[org/wiki/Network_interface_device#Optical_network_terminals](https://www.fiberchannel.org/wiki/Network_interface_device#Optical_network_terminals) Some ISP's use ONT's that have integrated routers - its easier for THEM but it gives them more control over. Should I keep James when I upgrade the router?

Also, what exactly does James do?

"James" is your optical network terminal (ONT), it converts the fiber-optic signal coming from your ISP's infrastructure on the street to a regular wired connection.
