

Is there time to remove the optical module

Overview

Every time we install and remove the module will cause wear and tear of the module, which will reduce the working life of the module. Removing an SFP module from a network switch may appear simple, but improper handling can damage the transceiver, the switch port, or even the fiber interface. Whether you are performing routine maintenance, replacing a failed optical transceiver, upgrading link speeds, or troubleshooting a. Take ESD protection measures when replacing optical modules. Unplug the optical fibers from the optical module before removing it. Preparation Before Installation 1. Product Inspection Whether the packaging is in an anti-static bag. Before removing the dust plugs and making any optical connections, follow these guidelines: 1:Keep the protective dust plugs installed in the unplugged fiber-optic cable connectors and in the transceiver optical bores until you are ready to make a connection. 2:Inspect and clean the MPO connector. There are two undocumented commands which can be used to force the Cisco Catalyst switch to enable the GBIC port and use the 3rd party SFP / SFP+.
