

Mini network cabinet fan not spinning

Overview

The good news: most non-spinning chassis fans come down to a short list of fixable causes—no power, the wrong control mode, an aggressive fan curve, a hub issue, or a faulty unit. When a fan stops spinning, it can be a real problem. Let's get straight to the heart of the matter and explore the. My issue was that the fans motor was accidentally turned off by the wireless remote controller used to RGB. For others experiencing similar issues, try the follow trouble shooting steps: Howdy! Got an issue here. But first some context; I got a prebuilt PC and upgraded its components over time. In some systems, the fans are connected to a fan Hub which, in turn, is powered by a cable to that Hub from the mobo or from the PSU. So NO power connection to that Hub board (if you have this) also can cause this.
