

Molded Cable Tray Construction Process

Overview

Modern cable tray manufacturing employs sophisticated forming technologies that transform prepared steel materials into functional tray components. Understanding the association representing the major electrical equipment manufacturers in the U.S. The Cable Traying standards, performance standards, test standards and application in this document have been tested extensively by competent professional engineers completely installed, without damage either to conductors or. Scope :- This specification covers the following major activities; - Fabrication and installation of Mild Steel (MS) support structure for Galvanized Iron (GI) Cable tray. - Installation of perforated GI Cable tray of size 300 x 50 mm at height ~12 meter on wall and existing metal support structure. 1. Cable tray making machines are used to manufacture cable trays - an important component in electrical installations and industrial buildings for routing cables and wires safely.
