Overview

The Definitive Guide to Network Architecture A core switch is a high-capacity, high-performance Layer 3 switch positioned at the physical backbone of an enterprise network. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum. A core switch is the backbone of a large-scale network, designed to handle massive volumes of traffic with ultra-low latency and maximum reliability. Primary Role: Provides device-level connectivity. Performance: Moderate capacity, suitable for smaller traffic loads. Due to their complexity, these networks require regular maintenance, troubleshooting, and upgrades, which are done in phases. To simplify this. Providing The Most Competitive Networking Products For Global Customers In the realm of system networking, three key types of switches are frequently mentioned: access switches, aggregation switches, and core switches.
