

Network Interface fc

Overview

Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. Fibre Channel networks form a. An Ethernet card, often called a Network Interface Card (NIC), is a hardware component that allows devices to connect to a network, typically a Local Area Network (LAN). Ethernet cards communicate using the TCP/IP protocol, a standard suite used for routing data across the internet and most. This chapter contains the following sections: On Cisco Nexus 3000 Series switches, Fibre Channel capability is included in the Storage Protocol Services license. Ensure that you have the correct license installed (N5010SS or N5020SS) before using Fibre Channel interfaces and capabilities. It is used primarily for storage area networks (SANs).
